

LASER AMMO

TRAINING TECHNOLOGIES

FIREARMS TRAINING LIKE NO OTHER

Laser Based Training with Simulators, Reactive Targets & More

Dry-fire is the safest, most efficient way to increase an officer's skill regardless of their experience level. It allows you to increase proficiency with draw, sight acquisition, trigger control, improve speed and accuracy of reloads, smooths and speeds up transitions, assists in controlling breathing and heart rate, and allows an officer to incorporate movement. Fundamentals are made flawless by building muscle memory through repetition. Learn more about our laser trainers, reactive targets, and simulators at Laser-Ammo.se
